

(A) SCENARIO & FIELD SELECTION

Scenario S1

CONTEXT

This automation sends a notification whenever a weather forecast report is triggered.

WHAT YOU NEED TO DO

Choose an event field to set the condition that decides when the action is triggered, and describe what the automation should do.

SERVICES

Trigger: Weather

Action: If Notifications

▼ Event data (1)

All None

High temp fahrenheit

Tomorrow's high temperature in degrees Fahrenheit

High temp celsius

Tomorrow's high temperature in degrees Celsius

Low temp fahrenheit

Tomorrow's low temperature in degrees Fahrenheit

Low temp celsius

Tomorrow's low temperature in degrees Celsius

Tomorrows date

Tomorrow's date

▼ Action config (0)

All None

Message

Text to send as notification

High priority

(B) NON-EXPERT INTERACTION

Scenario S1

CONTEXT

This automation sends a notification whenever a weather forecast report is triggered.

Trigger: Weather

Action: If Notifications

User

Send me a message when the temperature is around 4 degrees

Assistant

Your automation currently checks for exactly 4°. Did you mean to be notified when the temperature is **4 degrees or lower**? Try to rephrase the intent.

User

If tomorrow's minimum temperature is 4°C or below, send me a notification

Assistant

Your automation has been generated correctly.

Write the intent or a question...

Proceed to next scenario

(b) Non-expert: chat with evaluator feedback, no code shown

(C) EXPERT INTERACTION

Intent

If tomorrow's minimum temperature is 4°C or below, send me a notification

Generated Code

```
if (Weather.LowTempCelsius <= 4) {
  IfNotifications.sendMessage(
    "The minimum temperature tomorrow is "
    + Weather.LowTempCelsius + " °C."
  );
} else {
  IfNotifications.skip();
}
```

Edit

Save

```
if (Weather.LowTempCelsius <= 4) {
  IfNotifications.sendMessage(
    "The minimum temperature tomorrow is "
    + Weather.LowTempCelsius + " °C."
  );
} else {
  IfNotifications.skip("Temperature is above
```
